

OpenAI Chat CompletionsOpenAI

安装 / Setup

```
pip install openai
from openai import OpenAI
client = OpenAI(api_key=...)
```

Chat Completions(经典)

```
r = client.chat.completions.create(
    model="gpt-5",
    messages=[
        {"role":"system","content":"..."},
        {"role":"user","content":"hi"}],
    tools=[...], temperature=0.7,
    stream=True)
print(r.choices[0].message.content)
```

Responses API(新)

```
r = client.responses.create(
    model="gpt-5",
    input=...",
    instructions=...",
    tools=[{"type":"web_search"}])
r.output_text
```

JSON Schema 结构化输出

```
response_format={
    "type":"json_schema",
    "json_schema":{"name":"X",
        "schema":{"...},"strict":True}}
```

关键点

system 角色在 Responses API 改名
developer;parallel_tool_calls 默认 True

Anthropic MessagesAnthropic

安装 / Setup

```
pip install anthropic
from anthropic import Anthropic
client = Anthropic(api_key=...)
```

Messages 主接口

```
r = client.messages.create(
    model="claude-opus-4-7",
    system="You are ...",
    messages=[
        {"role":"user","content":"hi"}],
    tools=[...],
    max_tokens=4096,
    temperature=1)
r.content[0].text
```

Content Blocks(关键)

text	普通文字
image	base64 / URL 图片
tool_use	模型发起调用
tool_result	回填工具输出
thinking	扩展思考块

Prompt Caching

```
{"type":"text","text":"...",
"cache_control":{"type":"ephemeral"}}
# 5min / 1h, 写入 +25%, 读 -90%
```

Gemini APIGoogle

安装 / Setup(新 SDK)

```
pip install google-genai
from google import genai
from google.genai import types
client = genai.Client(api_key=...)
```

generate_content

```
r = client.models.generate_content(
    model="gemini-2.5-pro",
    contents=["hi"],
    config=types.GenerateContentConfig(
        system_instruction="...",
        tools=[...],
        temperature=0.7,
        response_mime_type=
            "application/json",
        response_schema=Pydantic))
r.text
```

Context Caching

```
cache = client.caches.create(
    model="gemini-2.5-pro",
    config=types.CreateCachedContentConfig(
        contents=[...],ttl="3600s"))
# 用 cache.name 复用,长上下文省钱
```

关键点

老 google-generativeai 已弃用; contents 列表元素用 Part / 字符串均可

流式输出Streaming (SSE)

协议

三家都用 SSE(Server-Sent Events),HTTP 长连接,逐 chunk 推送
data: 帧;SDK 把 SSE 包装成迭代器

OpenAI(增量 delta)

```
stream = client.chat.completions
    .create(..., stream=True)
for chunk in stream:
    d = chunk.choices[0].delta.content
    if d: print(d, end="")
```

Anthropic(累积 + helpers)

```
with client.messages.stream(...) as s:
    for text in s.text_stream:
        print(text, end="")
msg = s.get_final_message()
```

Gemini

```
for chunk in client.models
    .generate_content_stream(...):
    print(chunk.text, end="")
```

累积 vs 增量

OpenAI delta	需自行拼接 content
Anthropic event	message_start/delta/stop
Gemini chunk	每片是完整 Response 切片

工具调用Tool Use / Function Calling

Schema(三家相似)

基于 JSON Schema: name / description / parameters 或 input_schema

OpenAI

```
tools=[{"type":"function定义"}]
strict: true 强制 schema 合法
parallel_tool_calls 默认 True
tool_choice="auto" auto/required/none/{...}
```

Anthropic

input_schema	JSON Schema
disable_parallel_tool_calls	关并(默认开)
tool_choice={"type":"any"/any/tool/none	any/tool/none

Gemini

FunctionDeclaration	types.Tool 包装
tool_config	AUTO/ANY/NONE

多轮回填

把 assistant 的 tool_use + user 的 tool_result 一起 append 回 messages,再 call;直到无 tool_use 即结束

多模态 / 视觉Vision / Multimodal

OpenAI(image_url)

```
{"type":"image_url",...URL 或 data:base64
image_url.detail low / high / auto
```

Anthropic(source)

```
{"type":"image", "source":base64 或 url 类型
media_type image/png/jpeg/webp/gif
```

Gemini(Part)

```
Part.from_bytes(data,media_type)
Part.from_uri(uri,mime)GCS / Files API URI
```

URL 图片

三家都接受 https:// URL,服务器侧抓取(私网/防盗链需走 base64)

PDF 文档

Anthropic	原生 document 块,逐页视觉化
OpenAI	Files API 上传 → 在 messages 引用
Gemini	直接传 PDF Part(2GB/文件)

音视频

Gemini 原生支持音视频 Part;OpenAI 需 Whisper / GPT-4o audio;Anthropic 暂无音频

错误处理Errors & Retry

常见状态码

400	参数/schema 不合法,不要重试
401 / 403	key / 权限 / 区域问题
404	model 名拼错或无访问
413 / 422	payload 过大 / 不可处理
429	rate limit,看 Retry-After header
5xx / 529	服务过载,指数退避 + jitter

SDK 内置重试

OpenAI(max_retries=2) 默认 2 次,指数退避

Anthropic(max_retries=5)同上,只重试 408/429/5xx

google-genai 用 google.api_core.retry

Idempotency

OpenAI: idempotency-keyheader,24h 内幕等

Anthropic: idempotency-token,UUID 即可

Gemini 无原生,自行去重

退避公式

delay = min(cap, base * 2^n) ± rand.jitter ;base=1s,cap=10s

高效技巧Pro Tips

用官方 SDK不用 raw HTTP——重试/流式/类型都是免费的

结构化输出用 Pydantic:OpenAI response_format ,Gemini response_schema ,Anthropic 走 tool_use

Anthropic Prompt Caching: cache_control + 1h TTL,读取 -90%,写入 +25%

OpenAI 自动 Prompt Cache:prompt >1k token 自动命中,缓存命中 -50%

Gemini Context Caching:长系统/RAG 文档显式建 cache + TTL,长文本省一大笔

Batch API 异步任务直接 50% 折扣(OpenAI/Anthropic 都有),24h 完成

tier / rate limit 看 dashboard,RPM/TPM/RPD 三维度,涨 tier 看消费 + 时间

统一接口用 LiteLLM / Portkey,一份代码切百家模型 + 观测

大上下文别全塞 system,Anthropic system 数组分块更利于 cache

流式 + 工具:OpenAI 用 tool_calls 累积,Anthropic 用 input_json_delta 拼接

本地调试:OpenAI OPENAI_LOG=debug ,Anthropic ANTHROPIC_LOG=debug

token 计算用 tiktoken / anthropic.count_tokens / client.models.count_tokens

多 key 轮询防 429,async 并发用 AsyncOpenAI / AsyncAnthropic

选模型:Opus 推理 / Sonnet 通用 / Haiku 快;GPT-5 通才;Gemini 2.5 长 context

生产加 OpenTelemetry:Langfuse / Helicone / Phoenix 观察 token + 延迟
